# FARQUHAR'S POT-GROWN STRAWBERRY PLANTS

These are strong pot-grown plants, which can be safely shipped to any reasonable distance. If planted early, they will produce a large crop of fruit next year. All varieties offered are perfect flowering, needing no fertilization by another variety.

**Cultural Directions.** The Strawberry is easily cultivated; abundant crops can be obtained from a variety of soils, differing widely in character, from a light sand to a heavy clay. The best soil is a deep sandy loam, but any soil suited to the growth of ordinary field or garden crops may be trusted to successfully grow the Strawberry. The soil should be broken up and pulverized by spade-trenching or subsoil-plowing, enriching with good stable manure to a depth of fully two feet, the quantity of manure to be determined by the condition of the soil. The plants may be set in beds of three rows one foot apart and one foot distant in the rows, with a space of two and a half feet between the outside rows of adjoining beds left for a pathway. They may also be planted in single rows three feet apart and one foot apart in the rows.
